

# PAL SUJOY (宋知礼)

## Artificial Intelligence Undergraduate Student

Tianjin, China 18322077423 sujoyjitu1@gmail.com WeID: wxid\_1ryhpyv66u8122

"Motivated Artificial Intelligence undergraduate student at Tiangong University with a strong academic foundation in Python, Machine Learning, prompt engineering, and intelligent agent development, eager to contribute to advanced virtual simulation and national-level academic projects."

## EDUCATION & ACADEMIC BACKGROUND

### Tiangong University

Bachelor of Science in Artificial Intelligence

Tianjin, China

2025 – 2029 (Start Year: 2025)

1st Semester GPA: 3.82 / 4.0 | Focused Coursework: Artificial Intelligence Foundations, Data Structures, Python Programming, and Machine Learning.

## TECHNICAL EXPERTISE & COMPETENCIES

|                          |                                                                                                         |
|--------------------------|---------------------------------------------------------------------------------------------------------|
| Programming & Web:       | Python, HTML, CSS, C (Basic understanding)                                                              |
| ML & Data Science:       | PyTorch, Pandas, NumPy, Seaborn, Matplotlib, Scikit-Learn                                               |
| AI & Prompt Engineering: | Prompt Design, Temperature Tuning, Prompt Injection Mitigation, AI Agents Construction, API Integration |
| AI Platforms & Tools:    | ChatGPT, Claude, Kimi, DeepSeek, Gamma, Coze, Doubao                                                    |
| Databases & Workflow:    | MySQL, Git, GitHub, VS Code, Jupyter Notebook                                                           |

## PROJECT EXPERIENCE & RESEARCH COMPETENCE

### Real vs. Fake News Prediction & Rock vs. Mine Prediction | Python, Scikit-Learn, Pandas, NLTK

Engineered NLP-based classification models using text preprocessing and machine learning algorithms to accurately detect fake news articles and classify complex acoustic sonar signatures.

### House Price Prediction & Medical Insurance Premium Prediction | Python, Scikit-Learn, NumPy, Seaborn

Designed robust regression models for property market valuation and healthcare cost estimation, incorporating comprehensive exploratory data analysis, feature engineering, and evaluation metrics.

### Credit Card Fraud Detection & Titanic Survival Prediction | Python, Pandas, Scikit-Learn

Implemented advanced binary classification pipelines to identify fraudulent financial transactions and evaluate historical passenger survival factors under optimized metrics.

### Customer Segmentation & Sentiment Analysis | Python, Scikit-Learn, Pandas

Applied unsupervised learning (K-Means clustering) for behavioral customer segmentation and conducted sentiment polarity evaluation on textual datasets.

### Image Classification (CIFAR & Fashion MNIST) | Python, PyTorch, Matplotlib

Developed deep learning image recognition pipelines using PyTorch tensors, custom neural network architectures, and iterative training workflows.
